ToneAnalysis.com

Open-Source AI Email Analyzer & Automated Rewrite

About

ToneAnalysis is a web application that analyzes, rewrites, and optimizes the tone of business emails using AI.

Three Modes:
- **Draft Email:** Generate a complete email from a short prompt
- **Respond to Email:** Create appropriate responses to received emails
- **Analyze Only:** Get detailed tone and sentiment analysis

Features:
- Text input, file upload (TXT, PDF, DOCX), and voice recording
- Multiple tone options: Proofread, Professional, Formal, Casual, Friendly
- Real-time sentiment analysis with 7-section reports
- Rate limiting and security layers built-in

Setup

1. Add your OpenAI API key to `config/config.php`
2. Upload files to your server
3. Done

Known Issue

Occasionally (~5% of requests), the AI returns a non-standard format causing report sections to overlap. A page refresh (Ctrl+R) resolves this. This is an API response formatting issue, not a code bug.
